

dbr:Napoleon

```
graph TD; A([dbr:Napoleon]) --> B[dbo:birthPlace | dbo:birthDate | ..... | foaf:name]; B --> C([dbr:Corsica]); B --> D[1769-08-15]; B --> E["\"Napoleon\"@en"]
```

The diagram illustrates a mapping from a URI to a table row and then to specific values. At the top left, an oval contains the URI `dbr:Napoleon`. An arrow points from this oval to the first cell of a table, `dbo:birthPlace`. The table has four columns: `dbo:birthPlace`, `dbo:birthDate`, `.....`, and `foaf:name`. Arrows point from each of these four cells to their respective values below: `dbr:Corsica` (in an oval), `1769-08-15` (in a rectangle), and `"Napoleon"@en` (in a rectangle).

dbo:birthPlace

dbo:birthDate

.....

foaf:name

dbr:Corsica

1769-08-15

"Napoleon"@en
